#### Detail Description Paragraph - DETX (140):

[0152] In addition to the use in baking, discussed above, the carbohydrate oxidase may be used, for example, in personal care products such as toothpaste, in particular, where whitening of the teeth is desirable, mouthwash, denture cleaner, liquid soap, skin care creams and lotions, hair care and body care formulations, and solutions for cleaning contact lenses in an amount effective to act as an antibacterial agent. The carbohydrate oxidase may also be a component of a laundry detergent composition or a dishwashing detergent composition and may be used for the generation of hydrogen peroxide. The laundry detergent composition may comprise a surfactant, said carbohydrate oxidase and a substrate for the carbohydrate oxidase. The dishwashing detergent composition may comprise said carbohydrate oxidase and a bleach precursor or peroxy acid, and a substrate for carbohydrate oxidase.

#### Detail Description Paragraph - DETX (148):

[0160] 4 mg/ml recombinant Coprinus cinereus peroxidase (rCiP)

#### Detail Description Paragraph - DETX (210):

[0205] Samples of 500 . $\mu$ l were removed at days 3, 5, and 7 from each flask and assayed for carbohydrate oxidase activity. Carbohydrate oxidase activity was measured in a 96 well plate containing 10 . $\mu$ l of supernatant followed by the addition of 1 . $\mu$ l of o-anisidine, 69 . $\mu$ l of Britton and Robinson buffer pH 6.0, 10 . $\mu$ l of 1 M D-glucose, and 10 . $\mu$ l of Coprinus cinereus peroxidase (3.76 PODU/ml), obtained as described in WO 92/16634. The activity was measured at 405 nm for 10 minutes in mOD/min. The transformants all produced detectable carbohydrate oxidase activity. The addition of riboflavin 5'-phosphate to the shake flasks had a minor effect on increasing activity. Samples of 20 . $\mu$ l from the highest carbohydrate oxidase producers were run on an 8-16% Tris-Glycine gel (Novex, San Diego, Calif.) which confirmed the

production of carbohydrate oxidase.

Detail Description Paragraph - DETX (231):

[0220] Assuming that the oxidation of each D-glucose molecule was coupled to the reduction of one O<sub>2</sub> to H<sub>2</sub>O<sub>2</sub>, recombinant carbohydrate oxidase activity was measured using a Hansatech O<sub>2</sub> electrode as described in Example 10. The recombinant carbohydrate oxidase oxidized D-glucose (0.1 M) at a specific activity of 4.0 IU/A<sub>280</sub> or 116 turnover/minute at pH 5.5 and 20.degree. C. As assayed by the **Coprinus cinereus** peroxidase/anisidine method described in Example 8, the recombinant carbohydrate oxidase had the same specific activity as wild-type enzyme.

ABSTRACT:

The present invention relates to an enzymatic composition capable of killing or inhibiting microbial cells or micro-organisms, e.g. in laundry, on hard surfaces, in water systems, on skin, on teeth or on mucous membranes. The present invention also relates to the use of said enzymatic composition for preserving food products, cosmetics, paints, coatings, etc.

Brief Summary Text - BSTX (4):

Various enzymatic antimicrobial compositions are known in the art. For instance, WO 94/04127 discloses stabilized dentifrice compositions which are capable of producing antimicrobially effective concentrations of hypothiocyanite ions. The compositions contain an oxidoreductase capable of producing hydrogen peroxide and a peroxidase enzyme capable of oxidizing thiocyanate ions normally present in saliva to antimicrobial hypothiocyanite ions. Suitable peroxidases include lactoperoxidase, myeloperoxidase, salivary peroxidase and chloroperoxidase.

Brief Summary Text - BSTX (5):

In EP-A-0 500 387 enzymatic antimicrobial compositions are disclosed comprising a haloperoxidase, e.g., myelo-peroxidase, eosinophil oxidase, lactoperoxidase and chloroperoxidase, which selectively binds to and inhibits the growth of target micro-organisms in the presence of peroxide and halide.

Brief Summary Text - BSTX (8):

WO 97/42825 discloses an antimicrobial composition comprising a peroxidase, a hydrogen peroxide source and an enhancing agent of the phenothiazine-type or of the acetosyringate-type.

Drawing Description Text - DRTX (3):

FIG. 1 shows the antimicrobial activity of C. cinereus peroxidase against P. fluorescens. (Peroxidase: 3 POXU/ml, Enhancing agent: 200 .mu.M N-hydroxyacetanilide; see Example 1). .box-solid.=pH 8; .quadrature.=pH 6; - - ==total kill.

Drawing Description Text - DRTX (5):

FIG. 3 shows the dosis-response curve for N-hydroxyacetanilide in combination with Coprinus laccase (rCCL) at pH 6, 20 min and 40.degree. C. (see Example 2). --.quadrature.--=Enterococcus faecalis; - -.largecircle.- =Pseudomonas aeruginosa; . . . .DELTA.. . . =Enterobacter aerogenes.

Detailed Description Text - DETX (48):

Other preferred fungi include strains belonging to the subdivision Basidiomycotina, class Basidiomycetes, e.g., Coprinus, Phanerochaete, Coriolus or Trametes, in particular Coprinus cinereus f. microsporus (IFO 8371), Coprinus macrorhizus, Phanerochaete chrysosporium (e.g. NA-12) or Trametes (previously called Polyporus), e.g., T. versicolor (e.g. PR4 28-A).

Detailed Description Text - DETX (54):

Particularly, a recombinantly produced peroxidase is a peroxidase derived from a Coprinus sp., in particular C. macrorhizus or C. cinereus according to WO 92/16634.

Detailed Description Text - DETX (63):

Suitable examples from fungi include a laccase derivable from a strain of *Aspergillus*, *Neurospora*, e.g., *N. crassa*, *Podospora*, *Botrytis*, *Collybia*, *Fomes*, *Lentinus*, *Pleurotus*, *Trametes*, e.g., *T. villosa* and *T. versicolor*, *Rhizoctonia*, e.g., *R. solani*, **Coprinus**, e.g., **C. cinereus**, *C. comatus*, *C. friesii*, and *C. plicatilis*, *Psathyrella*, e.g., *P. condelleana*, *Panaeolus*, e.g., *P. papilionaceus*, *Myceliophthora*, e.g., *M. thermophila*, *Schytalidium*, e.g., *S. thermophilum*, *Polyporus*, e.g., *P. pinsitus*, *Pycnoporus*, e.g. *P. cinnabarinus*, *Phlebia*, e.g., *P. radita* (WO 92/01046), or *Coriolus*, e.g., *C. hirsutus* (JP 2-238885).

Detailed Description Text - DETX (65):

A laccase derived from **Coprinus**, *Myceliophthora*, *Polyporus*, *Pycnoporus*, *Scytalidium* or *Rhizoctonia* is preferred; in particular a laccase derived from **Coprinus cinereus**, *Myceliophthora thermophila*, *Polyporus pinsitus*, *Pycnoporus cinnabarinus*, *Scytalidium thermophilum* or *Rhizoctonia solani*.

Detailed Description Text - DETX (103):

In a specific aspect, the invention provides a detergent additive comprising the **antimicrobial** composition of the invention. The detergent additive as well as the detergent composition may comprise one or more other enzymes such as a protease, a lipase, a cutinase, an amylase, a carbohydrase, a cellulase, a pectinase, a mannanase, an arabinase, a galactanase, a xylanase, an **oxidase**, e.g., a laccase, and/or a **peroxidase**.

Detailed Description Text - DETX (117):

Peroxidases/Oxidases: Suitable peroxidases/oxidases include those of plant, bacterial or fungal origin. Chemically modified or protein engineered mutants are included. Examples of useful peroxidases include peroxidases from **Coprinus**, e.g. from **C. cinereus**, and variants thereof as those described in WO 93/24618, WO 95/10602, and WO 98/15257.

Detailed Description Text - DETX (132):

**Antibacterial** Activity of **Coprinus Peroxidase** with N-Hydroxyacetanilide as Electron Donor

Detailed Description Text - DETX (133):

The **antimicrobial** activity of recombinant **Coprinus cinereus peroxidase** (rCiP), obtained as described in WO 92/16634, at pH 6 and pH 8 by use of N-hydroxyacetanilide as electron donor was tested.

Detailed Description Text - DETX (139):

Antibacterial activity of *Polyporus pinsitus* laccase (rPpL), obtained as described in WO 96/00290), and **Coprinus cinereus** laccase (rCcL), obtained as described in WO 97/08325, was determined with N-hydroxyacetanilide as enhancing

agent against *Pseudomonas aeruginosa* (ATCC 10145), *Enterobacter aerogenes* (ATCC 13048) and *Enterococcus faecalis* (DSM 2570). The bactericidal activity was determined as described in Example 1, the antimicrobial activity of rPpL (1 mg/L) was evaluated at pH 6, whereas rCcL (1 mg/L) was evaluated at pH 8.

Detailed Description Text - DETX (143):

**Antibacterial** activity of **Coprinus cinereus peroxidase** (rCiP), Polyporus pinsitus laccase (rPpL), **Coprinus cinereus** laccase (rCcL) and Rhizoctonia solani laccase (rRsL) (as described in WO 95/07988) was determined with different enhancing agents at pH 6 and 8 (buffers; see Example 1). The rCiP was combined with 0.5 mM hydrogen peroxide.

Claims Text - CLTX (6):

6. The method of claim 5, wherein the laccase is derived from **Coprinus**, Myceliophthora, Polyporus, Pycnoporus, Rhizoctonia, or Scytalidium.

Claims Text - CLTX (7):

7. The method of claim 6, wherein the laccase is derived from i **Coprinus cinereus**, Myceliophthora thermophila, Polyporus pinsitus, Pycnoporus cinnabarinus, Rhizoctonia solani, or Scytalidium thermophilum.

ABSTRACT:

The present invention relates to compositions and methods for decreasing the infectivity, morbidity, and rate of mortality associated with a variety of pathogenic organisms and viruses. The present invention also relates to methods and compositions for decontaminating areas colonized or otherwise infected by pathogenic organisms and viruses. Moreover, the present invention relates to methods and compositions for decreasing the infectivity of pathogenic organisms in foodstuffs.

ABSTRACT:

The properties of dough or bread can be improved by the addition of a carbohydrate oxidase which can oxidize the reducing end of an oligosaccharide more efficiently than the corresponding monosaccharide, e.g., preferentially

oxidizing maltodextrins or cellodextrins over glucose.

A novel carbohydrate oxidase having the capability to oxidize maltodextrins and cellodextrins more efficiently than glucose may be obtained from a strain of *Microdochium*, particularly *M. nivale*. The amino acid sequence of the novel carbohydrate oxidase has very low homology (<20% identity) with known amino acid sequences.

#### CROSS-REFERENCE TO RELATED APPLICATIONS

[0001] This application is a division of U.S. application Ser. No. 09/678,289 filed Oct. 2, 2000, which is a division of U.S. application Ser. No. 09/217,490, filed on Dec. 21, 1998, (now a U.S. Pat. No. 6,165,761), which claims the benefit of U.S. provisional application Nos. 60/068,717, filed on Dec. 23, 1997, and 60/088,725, filed on Jun. 10, 1998 and claims priority of Danish application nos. PA 1997 01505, filed on Dec. 22, 1997, and PA 1998 00763, filed on Jun. 4, 1998, the contents of which are fully incorporated herein by reference.

----- KWIC -----

#### Detail Description Paragraph - DETX (140):

[0152] In addition to the use in baking, discussed above, the carbohydrate oxidase may be used, for example, in personal care products such as toothpaste, in particular, where whitening of the teeth is desirable, mouthwash, denture cleaner, liquid soap, skin care creams and lotions, hair care and body care formulations, and solutions for cleaning contact lenses in an amount effective to act as an antibacterial agent. The carbohydrate oxidase may also be a component of a laundry detergent composition or a dishwashing detergent composition and may be used for the generation of hydrogen peroxide. The laundry detergent composition may comprise a surfactant, said carbohydrate oxidase and a substrate for the carbohydrate oxidase. The dishwashing detergent composition may comprise said carbohydrate oxidase and a bleach precursor or peroxy acid, and a substrate for carbohydrate oxidase.

ABSTRACT:

A process for preparing nanoparticles, microparticles and nanoencapsulated products using the PIN process is provided. The invention involves using additives to reduce the aggregation or coalescence of the PIN nanoparticles, microparticles, or nanoencapsulated products during their formation and collection and to facilitate the recovery of said nanoparticles, microparticles, or nanoencapsulated products.

RELATED APPLICATIONS

[0001] This application claims priority under 35 U.S.C. .sctn. 119 to U.S. provisional application serial No. 60/339,979, filed Dec. 10, 2001 and to U.S. provisional application serial No. 60/339,980 filed Dec. 10, 2001 each of which is incorporated by reference in its entirety.

ABSTRACT:

The invention involves methods and products related to the micronization of hydrophobic drugs. A method of micronizing hydrophobic drugs using a set of solutions including an aqueous solution is provided. The invention also relates to products of micronized hydrophobic drugs and related methods of use.

RELATED APPLICATIONS

[0001] This application claims priority under 35 U.S.C. .sectn.119 to U.S. provisional application serial No. 60/311,043, filed Aug. 8, 2001, which is incorporated herein by reference.

----- KWIC -----

Detail Description Paragraph - DETX (8):

[0039] The methods are particularly useful for micronizing hydrophobic agents. The hydrophobic agent may be any type of hydrophobic compound including active agents and non-active agents. The hydrophobic agent is an agent that does not adsorb or absorb water. Hydrophobic active and non-active agents include, but are not limited to, adhesives, gases, pesticides, herbicides, fragrances, antifoulants, dyes, salts, oils, inks, cosmetics, catalysts, detergents, curing agents, flavors, foods, fuels, metals, paints,

photographic agents, biocides, pigments, plasticizers, propellants and the like. The active agent also may be a bioactive agent. The bioactive agent may be, for example, adrenergic agent; adrenocortical steroid; adrenocortical suppressant; aldosterone antagonist; amino acid; anabolic; analeptic; analgesic; anesthetic; anorectic; anti-acne agent; anti-adrenergic; anti-allergic; anti-amebic; anti-anemic; anti-anginal; anti-arthritic; anti-asthmatic; anti-atherosclerotic; **antibacterial**; anticholinergic; anticoagulant; anticonvulsant; antidepressant; antidiabetic; antidiarrheal; antidiuretic; anti-emetic; anti-epileptic; antifibrinolytic; antifungal; antihemorrhagic; antihistamine; antihyperlipidemia; antihypertensive; antihypotensive; anti-infective; anti-inflammatory; **antimicrobial**; antimigraine; antimitotic; antimycotic, antinauseant, antineoplastic, antineutropenic, antiparasitic; antiproliferative; antipsychotic; antirheumatic; antiseborrheic; antisecretory; antispasmodic; antithrombotic; anti-ulcerative; antiviral; appetite suppressant; blood glucose regulator; bone resorption inhibitor; bronchodilator; cardiovascular agent; cholinergic; depressant; diagnostic aid; diuretic; dopaminergic agent; estrogen receptor agonist; fibrinolytic; fluorescent agent; free oxygen radical scavenger; gastrointestinal motility effector; glucocorticoid; hair growth stimulant; hemostatic; histamine H.sub.2 receptor antagonists; hormone; hypocholesterolemic; hypoglycemic; hypolipidemic; hypotensive; imaging agent; immunizing agent; immunomodulator; immunoregulator; immunostimulant; immunosuppressant; keratolytic; LHRH agonist; mood regulator; mucolytic; mydriatic; nasal decongestant; neuromuscular blocking agent; neuroprotective; NMDA antagonist; non-hormonal sterol derivative; plasminogen activator; platelet activating factor antagonist; platelet aggregation inhibitor; psychotropic; radioactive agent; scabicide; sclerosing agent; sedative; sedative-hypnotic; selective adenosine A<sub>1</sub> antagonist; serotonin antagonist; serotonin inhibitor; serotonin receptor antagonist; steroid; thyroid hormone; thyroid inhibitor; thyromimetic; tranquilizer; amyotrophic lateral sclerosis agent; cerebral ischemia agent; Paget's disease agent; unstable angina agent; vasoconstrictor; vasodilator; wound healing agent; xanthine **oxidase** inhibitor; Anti-cancer, e.g. paclitaxel.

Each of these applications is hereby incorporated herein by reference in their entireties. This invention was made in part during work partially supported by the U.S. government under DARPA grant No. MDA972-97-1-0007. The government has certain rights in the invention.

US-CL-CURRENT: 514/642, 514/937 , 514/938

ABSTRACT:

The present invention relates to compositions and methods for decreasing the infectivity, morbidity, and rate of mortality associated with a variety of pathogenic organisms and viruses. The present invention also relates to methods and compositions for decontaminating areas colonized or otherwise infected by pathogenic organisms and viruses. Moreover, the present invention relates to methods and compositions for decreasing the infectivity of pathogenic organisms in foodstuffs.

ABSTRACT:

The present invention relates to methods for cleaning, rinsing, and/or antimicrobial treatment of medical carts, medical cages, and other medical instruments, devices or equipment. The method for cleaning employs a solid alkaline, for example a solid carbonate, cleaning composition for cleaning the medical cart, cage, instrument, device, or equipment. The method for rinsing employs a solid neutral or neutralizing rinse composition for rinsing the medical cart, cage, instrument, device, or equipment. The method for antimicrobial treatment employs a solid, for example a solid quaternary ammonium or solid halogen, antimicrobial composition, for antimicrobial treatment of the medical cart, cage, instrument, device, or equipment.

Detailed Description Text - DETX (105):

The cleaning composition of the present invention can include one or more enzymes, which can provide desirable activity for removal of protein-based, carbohydrate-based, or triglyceride-based stains from substrates; for cleaning, destaining, and sanitizing, such as for medical and dental carts, cages, or

instruments. Suitable enzymes include a protease, an amylase, a lipase, a gluconase, a cellulase, a peroxidase, or a mixture thereof of any suitable origin, such as vegetable, animal, bacterial, fungal or yeast origin. Preferred selections are influenced by factors such as pH-activity and/or stability optima, the most ability, and stability to active detergents, builders and the like. In this respect bacterial or fungal enzymes are preferred, such as bacterial amylases and proteases, and fungal cellulases. Preferably the enzyme is a protease, a lipase, an amylase, or a combination thereof. A suitable cleaning effect can be achieved with amounts of enzyme as low as about 0.1 wt-% of the solid carbonate cleaning composition. In the cleaning compositions of the present invention, suitable cleaning can typically be achieved when an enzyme is present at about 1 to about 30 wt-%; preferably about 2 to about 15 wt-%; preferably about 3 to about 10 wt-%; preferably about 4 to about 8 wt-%; preferably about 4, about 5, about 6, about 7, or about 8 wt-%. The higher enzyme levels are typically desirable in highly concentrated cleaning formulations.

This application is a divisional of U.S. patent application Ser. No. 09/442,723, filed Nov. 18, 1999, now U.S. Pat. No. 6,235,224 which is a divisional of U.S. patent application Ser. No. 08/686,928, filed Jul. 3, 1996, now issued as U.S. Pat. No. 6,143,211 on Nov. 7, 2000, which claims priority to under 35 USC section 119 to U.S. Provisional Patent Application Ser. No. 60/001,365 entitled "Process for Preparing Microspheres Through Phase Inversion Phenomena" filed Jul. 21, 1995 by Edith Mathiowitz, Donald E. Chickering III, Yong S. Jong and Jules S. Jacob, now abandoned.

US-CL-CURRENT: 264/4, 264/4.1, 427/213.36

ABSTRACT:

A process for preparing nanoparticles and microparticles is provided. The process involves forming a mixture of a polymer and a solvent, wherein the solvent is present in a continuous phase and introducing the mixture into an effective amount of a nonsolvent to cause the spontaneous formation of microparticles.

Brief Summary Text - BSTX (38):

In general, the agent includes, but is not limited to, adhesives, gases, pesticides, herbicides, fragrances, antifoulants, dyes, salts, oils, inks, cosmetics, catalysts, **detergents**, curing agents, flavors, foods, fuels, metals, paints, photographic agents, biocides, pigments, plasticizers, propellants and the like. The agent also may be a bioactive agent. The bioactive agent can be, but is not limited to: adrenergic agent; adrenocortical steroid; adrenocortical suppressant; aldosterone antagonist; amino acid; anabolic; analeptic; analgesic; anesthetic; anorectic; anti-acne agent; anti-adrenergic; anti-allergic; anti-amebic; anti-anemic; anti-anginal; anti-arthritic; anti-asthmatic; anti-atherosclerotic; **antibacterial**; anticholinergic; anticoagulant; anticonvulsant; antidepressant; antidiabetic; antidiarrheal; antidiuretic; anti-emetic; anti-epileptic; antifibrinolytic; antifungal; antihemorrhagic; antihistamine; antihyperlipidemia; antihypertensive; antihypotensive; anti-infective; anti-inflammatory; **antimicrobial**; antimigraine; antimitotic; antimycotic, antinauseant, antineoplastic, antineutropenic, antiparasitic; antiproliferative; antipsychotic; antirheumatic; antiseborrheic; antisecretory; antispasmodic; antithrombotic; anti-ulcerative; antiviral; appetite suppressant; blood glucose regulator; bone resorption inhibitor; bronchodilator; cardiovascular agent; cholinergic; depressant; diagnostic aid; diuretic; dopaminergic agent; estrogen receptor agonist; fibrinolytic; fluorescent agent; free oxygen radical scavenger; gastrointestinal motility effector; glucocorticoid; hair growth stimulant; hemostatic; histamine H2 receptor antagonists; hormone; hypocholesterolemic; hypoglycemic; hypolipidemic; hypotensive; imaging agent; immunizing agent; immunomodulator; immunoregulator; immunostimulant; immunosuppressant; keratolytic; LHRH agonist; mood regulator; mucolytic; mydriatic; nasal decongestant; neuromuscular blocking agent; neuroprotective; NMDA antagonist; non-hormonal sterol derivative; plasminogen activator; platelet activating factor antagonist; platelet aggregation inhibitor; psychotropic; radioactive agent; scabicide; sclerosing agent; sedative; sedative-hypnotic; selective adenosine A1 antagonist; serotonin antagonist; serotonin inhibitor; serotonin receptor antagonist; steroid; thyroid hormone; thyroid inhibitor; thyromimetic; tranquilizer; amyotrophic lateral sclerosis agent; cerebral ischemia agent; Paget's disease agent; unstable angina agent; vasoconstrictor; vasodilator; wound healing agent; xanthine **oxidase** inhibitor.

ABSTRACT:

The present invention relates to an enzymatic composition capable of killing or inhibiting microbial cells or micro-organisms, e.g. in laundry, on hard surfaces, in water systems, on skin, on teeth or on mucous membranes. The present invention also relates to the use of said enzymatic composition for preserving food products, cosmetics, paints, coatings, etc.

Detailed Description Text - DETX (103):

In a specific aspect, the invention provides a detergent additive comprising the antimicrobial composition of the invention. The detergent additive as well as the detergent composition may comprise one or more other enzymes such as a protease, a lipase, a cutinase, an amylase, a carbohydrase, a cellulase, a pectinase, a mannanase, an arabinase, a galactanase, a xylanase, an oxidase, e.g., a laccase, and/or a peroxidase.
